# Refractometer for brines VSA2

Advice: most of customer prefer the ATC variant (because there is not necessary to use a thermometer and a temperature compensation table)

This optical refractometer (salinity meter) has scales in the range of 0 - 28 %. The reading resolution is 0.2 %. It is designed for the measurement of salt solutions and brines.

Scale / characteristic	Scale Range
Resolution	
Salinity	0 to 28 %
	0.2 %

The usual salinity of the selected aqueous solutions

Example: Salinity 36 ‰ means, that there are 36 grams of salt in 1 liter aqueous solution.

Fresh water	< 0.5 ‰
Brackish water	0.5 to 30 ‰
Saline water (Seawater)	30 to 50 ‰
Brine	> 50 ‰

Measurement

The liquid measurement is very easy. Place a few drops of the liquid on the optical part of the refractometer, cover the prism (the liquid will spread more easily over the prism), look throught the eyepiece against the light (focus, if necessary) and you will be able to read the result value on the scale.

Use up to 38 standards to establish standard curve. Four methods for fitting a curve:

1. Linear fit
2. Linear through zero
3. Square fit

### Kinetics

The Kinetics mode may be used for time course scanning or reaction rate calculations. Abs. Vs. time graphs is displayed on the screen in real time.

Wait time, test time and time intervals may be set.

### Wavelength scan

Automatically record peaks and valleys. The quantity of the curves is unlimited that you store.

Post-run manipulation and processing includes:

1. Re-scaling axes, curve
2. Smoothing, combination, zooming, overlap. . .
3. 1st to 4th derivative.

### Multi-wavelength Test

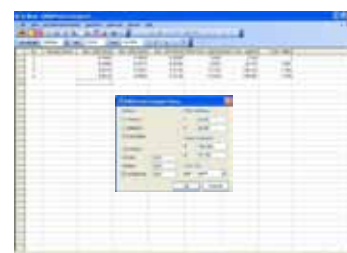

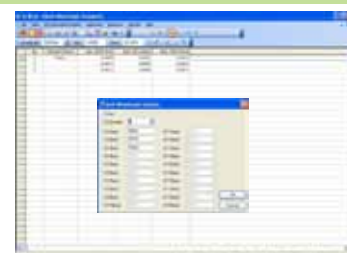

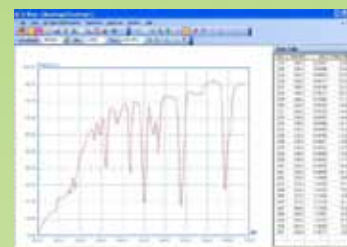

You can set at most 20 wavelengths to measure a sample.

### DNA/Protein Test

Two formulas are under your choice:

1. DNA Con.= $62.9 \times A_{260} - 36.0 \times A_{280}$   
or  $=49.1 \times A_{260} - 3.48 \times A_{230}$
